

MINIshell

https://dashboard.hive.fi/topics/101/messages?cursus_id=21

I'm using this wonderful blog post from Hiver4, Noel, about minishell, as a jumping off point.

#Parsing

I'm thinking of trying to do an Abstract Syntax Tree. Some hopefully useful links:

https://en.wikipedia.org/wiki/Abstract_syntax_tree

<https://www.twilio.com/en-us/blog/developers/tutorials/building-blocks/abstract-syntax-trees>

The other concept I'm going to study up on is LL(1) parsing

<https://www.geeksforgeeks.org/compiler-design/construction-of-ll1-parsing-table/>

Some fancy flowchart generation to show how the parsing should eventually work:

```
echo hello > testfile | echo $?
```
